

DIGS

search.geoscience.nsw.gov.au

DIGS® contains a wealth of exploration, geological and mining information about NSW in the form of departmental reports, publications, maps, plans and heritage records as well as reports, data and mine plans produced by exploration and mining companies.

System features:

- Search reports spatially using a map interface
- Apply comprehensive sorting and easily filter results
- Search on the entire report content and metadata
- Select and download multiple reports at once
- Export search result lists to spreadsheets
- Share search results via email
- Use advanced text search to construct complex queries

search.geoscience.nsw.gov.au

Search all reports and publications from the Geological Survey archives. Use the easy spatial search to discover records in your area of interest, or delve deeper using the advanced search.

All Reports Publications
