

NSW Seamless Geology Project

**[resourcesandenergy.nsw.gov.au/
seamless-geology](http://resourcesandenergy.nsw.gov.au/seamless-geology)**

This 5-year project will produce a dynamic model of NSW geology. Data is being released zone by zone, to be stitched together into a seamless geological model. The model will include major geological systems, from Palaeoproterozoic structural and metamorphic features of the Broken Hill Block, to Quaternary depositional systems of the east coast.

Features

- GIS datasets for free download
- available in ArcGIS, MapInfo and QGIS formats
- best available digital geological mapping data in an internally consistent format
- wide range of data integrated into a single model
- data is separated into layers, or time slices
- a dynamic geological model of NSW
