

NSW geology phone maps

www.resourcesandgeoscience.nsw.gov.au/phonemaps

GSNSW interactive geology maps are now available to download onto your mobile device using the **Explorer for ArcGIS** mobile application.

These maps display a range of information. Touch the screen to reveal the name, description, age, lithology and environment of formation of the underlying rock type. Your location appears on the map, which can be re-centred to your position with just one touch.

A useful tool for geologists, geophysicists, engineers, farmers, environmental consultants, students and anyone interested in geology, landforms and soils.

Features

- Free download to your mobile device (instructions on how to find our maps on website above)
- No mobile reception or wi-fi required once downloaded
- Geology maps and geophysics images
